

# PROTECTOR (L-08) - reliable protection that fits over corrective glasses

We have come a long way from the look of the first laser safety goggles to the design of the **PROTECTOR**. The first glasses looked like divers' goggles, and they were continuously fogging up because their side protection was good but extremely tight.

The **PROTECTOR** belongs to a new generation. It offers comfortable allround protection and also has small, cleverly devised vents. Due to the angle of these vents they are laser safe and prevent the goggles from fogging up.

This frame style fits well over prescription glasses. The **PROTECTOR** is the best solution for all applications with multiple users of the glasses as in universities, or for protecting visitors.
